· Unallocated Department

Costs that could not be mapped to any specific business department due to missing or incorrect department tagging in cloud resources or billing metadata. These costs require tag standardization for accurate chargeback and ownership tracking.

· Untagged Project

Cloud projects/resources that do not contain mandatory governance tags such as department, environment, owner, or cost center. Untagged projects reduce visibility, impact cost accountability, and make financial reporting difficult.

· Untagged Cost

Portion of total cloud spend generated from resources without proper tags or labels. Untagged costs cannot be attributed correctly to teams or environments, leading to gaps in cost optimization and budgeting analysis.
